

# Progress Is An American Tradition In The Steel Industry

From the Conestoga wagon to the super-powered bullets that streak down our highways . . . from the wireless radio to Telstar . . . American inventiveness has never stilled. The Wright Brother's timid sparrow of yesterday became today's silver jets. Tirelessly and relentlessly, the challenge of perfection stimulates the American mind and hand. From the dreamer to the builder . . . from the poet to the scientist . . . we are never satisfied with second-best.

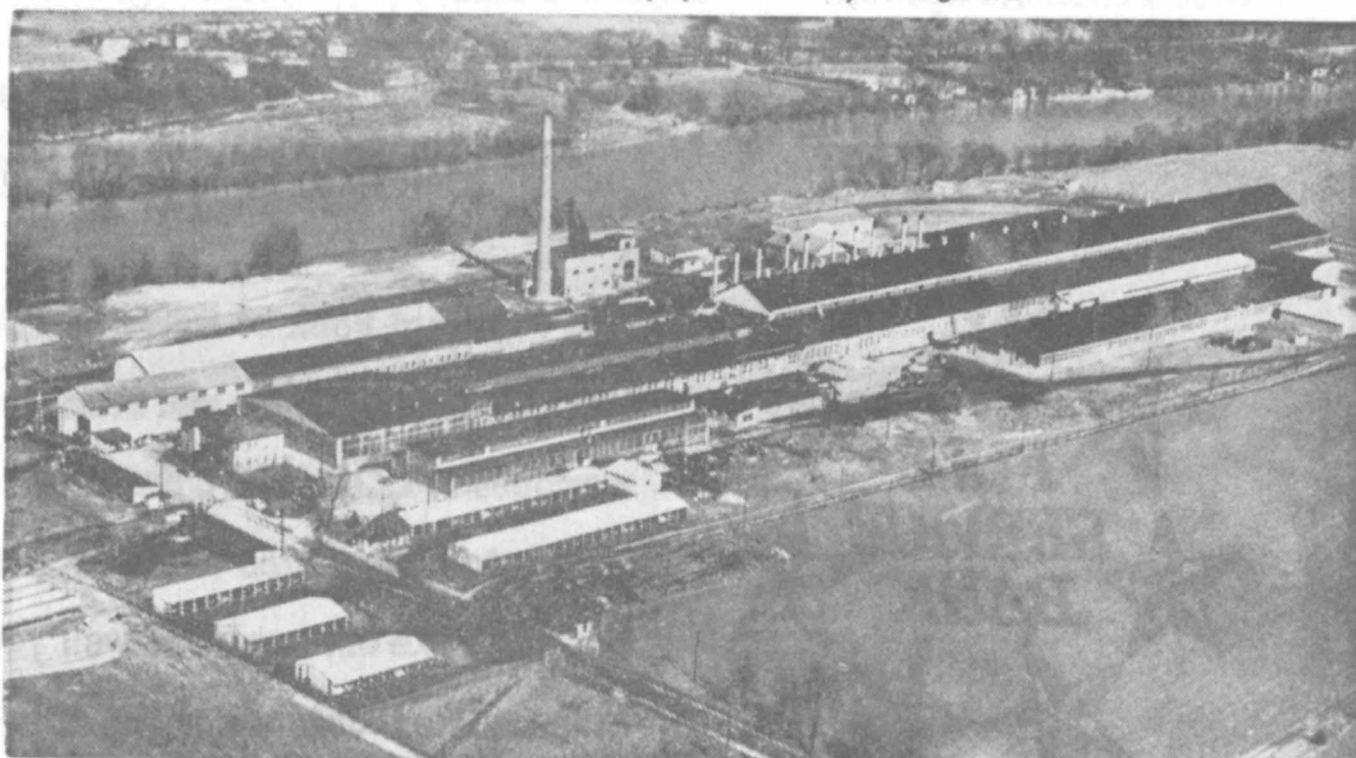

In today's constantly changing world, Greer Steel Co. keeps abreast of the latest scientific and manufacturing methods to maintain the highest quality of its products. The American consumer demands and deserves . . . not yesterday's invention . . . but today's growth and improvement.

Progress . . . An American custom in the Steel Industry . . . and especially Greer Steel Co.

Greer Steel Production Line

This is Greer Steel Co.'s highly mechanized production line. During the past 4 years Greer has expanded 4 times during remodeling projects that involved well over a million dollars. We now employ over 285 of your neighbors.
